

For OSX 10.4.x (Tiger)

1. Go to **Apple Menu>Preferences>Network**

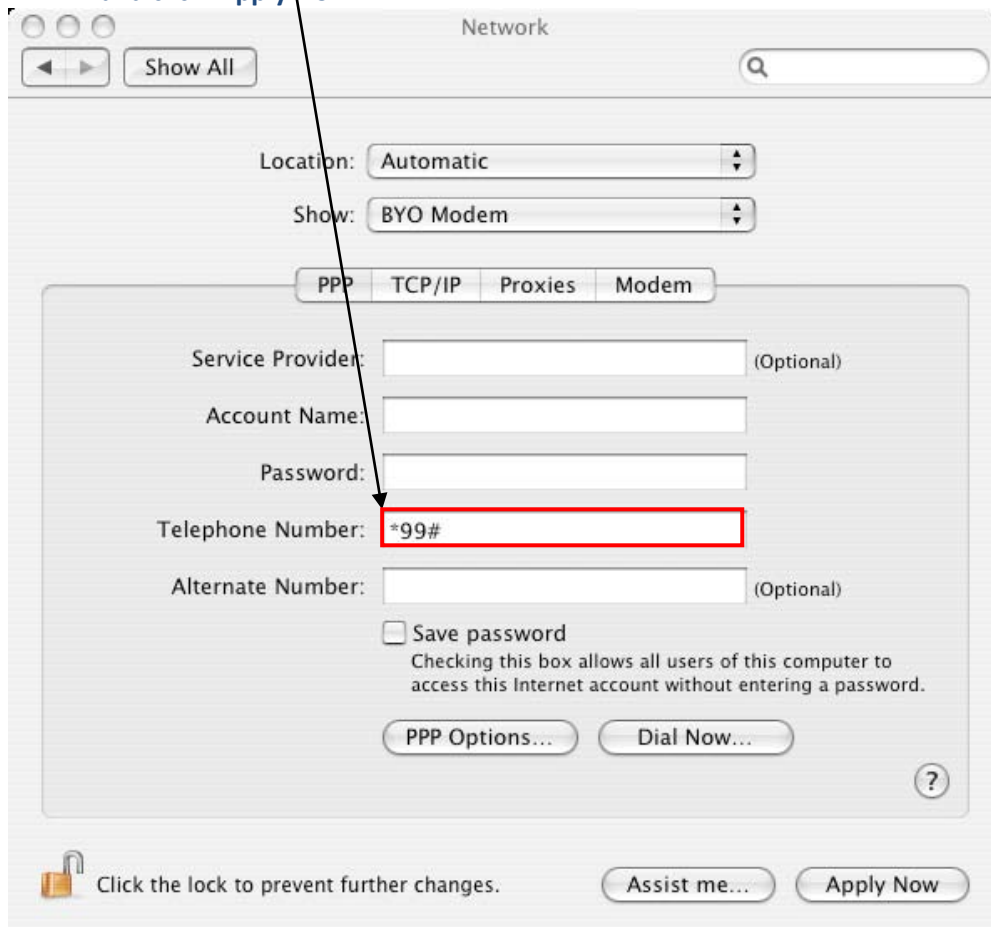

2. **Choose your USB modem** from the 'Show' dropdown menu. Here we will select **BYO modem** *(Your modem will be named anything you want it to be. Ours is BYO for demonstration)

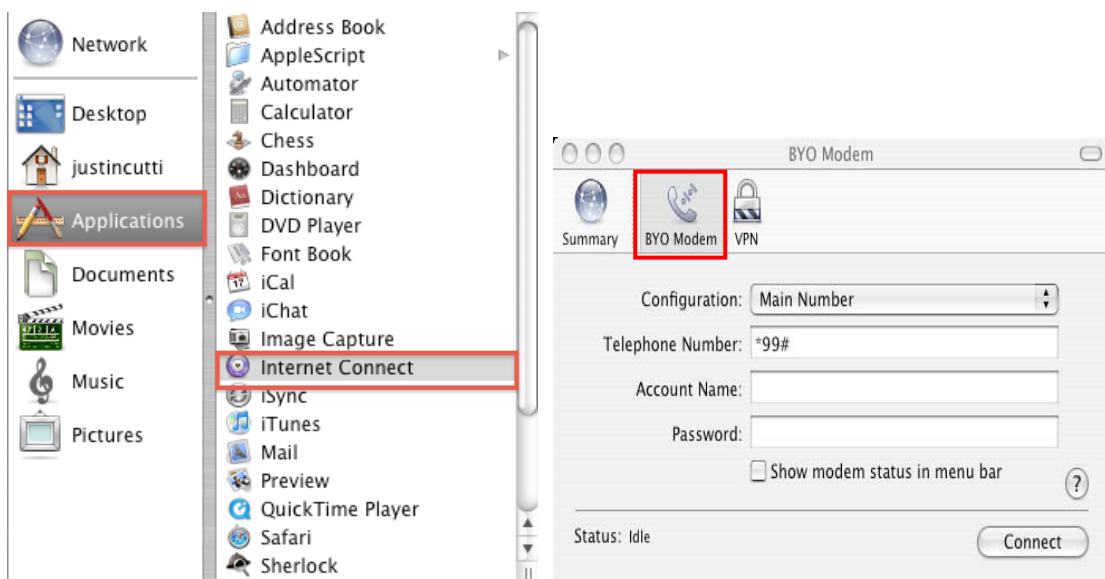

3. Once we select '**BYO Modem**' a configuration window will open

- Now enter ***99#** or ***99***1#** in the 'Telephone number' field. Do not enter anything else and click **'Apply Now'**

- Now you can close the window and from **Applications** in your menu select **'Internet Connect'**
- You should then see **BYO Modem** in **'Internet Connect'**. There you will be able to connect to the internet.

- You have successfully created an internet connection!
